SUMMARY

Senior Platform / DevOps / SRE engineer and technical lead with 10+ years of experience designing, automating, migrating, and operating resilient AWS and Kubernetes platforms. Leads platform engineering for 100+ applications across 10+ Amazon EKS clusters, combining hands-on incident management, infrastructure as code, CI/CD/GitOps, observability, security, and people leadership while sustaining 99.9%+ availability.

EXPERIENCE

Senior Platform Engineer

Boston Scientific

August 2024 - Present, Gurgaon, India

- **Lead platform engineering and operations** for 10+ multi-region Amazon EKS clusters supporting 100+ applications; own platform reliability, monitor key service-level indicators, and collaborate with application teams to standardize configurations while sustaining **99.95% availability**.
- **Diagnose and resolve complex AWS, Kubernetes, networking, security, and application incidents**, leading **deep-dive RCAs** and cross-functional stakeholder communications; **reduced MTTR from 90 to 45 minutes** through systematic remediation and problem solving.
- **Modernize automated application and infrastructure deployments** using GitLab CI, Argo CD, Helm, and Terraform, **reducing deployment lead time from 45 to 15 minutes** while improving consistency across application teams.
- **Implemented end-to-end observability** using Prometheus, Grafana, Loki, Datadog, and CloudWatch, along with Bash/GitLab-based synthetic monitoring for critical journeys across **100+ applications**, enabling proactive reliability and SLO monitoring.
- **Designed and built DHP Agent**, an AI-assisted Kubernetes operations platform using Python/FastAPI, LangChain, kubectl-ai, Azure OpenAI, RAG/ChromaDB, EKS, and Helm; helping **30+ users across 6 teams** accelerate troubleshooting and knowledge retrieval.
- **Architected DHP Agent security and access controls** using Azure AD/OAuth2 and Kubernetes RBAC, implementing namespace-scoped access with cluster-wide administrator visibility and persisting RAG data on EFS within controlled AWS network boundaries.
- **Designed and standardized multiple reusable Terraform modules** for AWS infrastructure, enabling consistent and repeatable deployments while reducing manual provisioning and operational effort.
- **Leveraged AI-assisted development tools including Claude Code and OpenAI Codex** to accelerate Python/Bash automation, Infrastructure as Code, CI/CD, testing, runbooks, and troubleshooting workflows.

Senior Consultant / Platform Lead / Cloud Infrastructure SME

Deloitte USI

January 2020 - May 2024, India

- **Led the Platform & Infrastructure team**, managing ~8 engineers across 3 workstreams and owning capacity planning, mentoring, stakeholder collaboration, production support, release readiness, and service outcomes while maintaining **99.9% application availability**.
- **Designed and implemented resilient AWS architectures** across compute, storage, networking, IAM, monitoring, and data services, balancing availability, security, scalability, reliability, and cost optimization requirements.
- **Implemented EKS autoscaling** using Kubernetes Cluster Autoscaler and HPA to dynamically match capacity with workload demand, improving application performance, reliability, and resource utilization.

- **Planned and executed production releases across client environments**, coordinating controlled change windows, release readiness, deployment activities, and rollback procedures while supporting **24x7 operations**.
- **Authored and maintained complex AWS CloudFormation templates** integrated with AWS CodePipeline, enabling repeatable Infrastructure-as-Code delivery and automated infrastructure deployments.
- **Provisioned AWS accounts and Organizational Units** using Terraform and GitHub Actions-based CI/CD, establishing repeatable multi-account infrastructure and governance across **~25 AWS accounts/OUs**.
- **Built a Reference Data Management (RDM) application** as a centralized repository for enterprise reference data, collaborating with stakeholders to support standardized access and maintainability across consuming applications.

Senior Systems Engineer / Automation Engineer

Infosys Ltd

June 2016 - January 2020, India

- Automated application and infrastructure delivery with AWS, Terraform, Python, REST APIs, and Ansible, reducing manual effort by about 60% and provisioning time from approximately 8 hours to 2 hours.
- Provisioned and operated ELB, EBS, IAM, CloudWatch, and Auto Scaling across roughly 20 environments/applications, improving service resilience and sustaining approximately 99.9% availability.
- Developed reusable Ansible roles and playbooks, reducing configuration variance by about 50% and accelerating environment setup by approximately 65%.

EDUCATION

Bachelor of Technology (B.Tech.), Computer Science

SRM University • India • 2016

SKILLS

Cloud & AWS: AWS, EKS, EC2, ECS, ECR, S3, Lambda, API Gateway, CloudWatch, RDS, Aurora, DynamoDB, IAM, SSM, Route 53, VPC, Subnets, NAT Gateway, Internet Gateway, ELB/ALB/NLB, SNS, SQS

Containers & Kubernetes: Kubernetes, Amazon EKS, Docker, Helm, Ingress, RBAC, ConfigMaps, Secrets, HPA, Cluster Autoscaler, Kubernetes networking, EKS upgrades, workload troubleshooting

Infrastructure as Code: Terraform, Infrastructure as Code (IaC), reusable modules, infrastructure automation, environment provisioning, configuration management

CI/CD & GitOps: Git, GitLab, GitHub, GitHub Actions, Argo CD, CI/CD pipelines, GitOps, release automation, rolling deployments, deployment and rollback strategies

SRE & Observability: Site Reliability Engineering (SRE), SLI, SLO, SLA, error budgets, incident management, Root Cause Analysis (RCA), capacity planning, reliability engineering, Datadog, Grafana, Prometheus, CloudWatch, monitoring, alerting, logging, performance troubleshooting.

Programming & Automation: Python, Bash, Linux, shell scripting, REST APIs, YAML, JSON, process management, system troubleshooting, automation scripting

Networking, Security & Data: VPC networking, subnets, routing, Route 53, DNS, NAT, TLS/SSL, network troubleshooting, IAM, security groups, PostgreSQL, RDS/Aurora, DynamoDB, S3.

AI Engineering: OpenAI Codex, Claude Code, FastAPI, LangChain, RAG, ChromaDB, kubectl-ai
